AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Original) A computer program product, tangibly embodied in an information carrier, for developing an application, the computer program product being operable to cause data processing apparatus to:

receive a first data model in a first language, the data model being used to structure development objects;

generate a set of intermediate objects based on the first data model; and based on the set of intermediate objects and a code template, generate an API to access the development objects.

- 2. (Original) The computer program product of claim 1, further comprising instructions to convert the first data model to a second data model in a second language, wherein the set of intermediate objects is based on the second data model.
- 3. (Original) The computer program product of claim 2, wherein the second language comprises XML.
- 4. (Original) The computer program product of claim 1, wherein the first language comprises UML.

- 5. (Original) The computer program product of claim 1, wherein the set of intermediate objects comprises Java objects.
- 6. (Original) The computer program product of claim 1, wherein the first language comprises a customizable extension.
- 7. (Currently Amended) The computer program product of claim-5_6, wherein the customizable extension is used to implement an additional feature of the API.
- 8. (Currently Amended) The computer program product of claim-6_7, wherein the additional feature comprises an indication of a file border.
- 9. (Original) The computer program product of claim 1, wherein the API comprises a copy and paste operation.
- 10. (Original) A computer program product, tangibly embodied in an information carrier, for developing an application, the computer program product being operable to cause data processing apparatus to:

receive a first data model in a first language, the data model being used to structure development objects;

generate a set of intermediate objects based on the first data model; and based on the set of intermediate objects and a schema template, generate an XML schema used to implement the development objects.

Attorney Docket No. 09700.0216-00000 SAP Reference No. 2003P00322 US

- 11. (Currently Amended) The computer program product of claim-1_10, further comprising instructions to convert the first data model to a second data model in a second language, wherein the set of intermediate objects is based on the second data model.
- 12. (Original) The computer program product of claim 11, wherein the second language comprises XML.
- 13. (Original) The computer program product of claim 10, wherein the first language comprises UML.
- 14. (Original) The computer program product of claim 10, wherein the set of intermediate objects comprises Java objects.
- 15. (Original) The computer program product of claim 10, wherein the XML schema includes a tree based on aggregation relationships in the first data model.
- 16. (Original) The computer program product of claim 10, wherein the XML schema includes a reference based on an association relationship in the first data model.

- 17. (Original) The computer program product of claim 10, wherein the XML schema includes a complex type extension based on an inheritance relationship in the first data model.
- 18. (Original) A computer program product, tangibly embodied in an information carrier, for developing an application, the computer program product being operable to cause data processing apparatus to: receive a first data model; derive an API based on the data model; and use the API to perform operations on a development object.
- 19. (Original) The computer program product of claim 18, wherein the API comprises an interface layer, a proxy layer, and a state layer.
- 20. (Currently Amended) The computer program product of claim 18, wherein the operations comprise:

creating a new development object <u>as a transient object</u> without an existing corresponding file <u>as a transient object</u>; and

modifying the transient object until the transient object is committed to a persistent file.

21. (Currently Amended) The computer program product of claim 20, further comprising instructions to destroy the transient object if a delete <u>command</u> is requested before the transient object is committed to a persistent file.

22. (Currently Amended) The computer program product of claim 20, further comprising instructions to mark the persistent file as deleted if a delete <u>command</u> is requested after the transient object is committed to a persistent file.
